Backend-Focused Software Engineer | Java · Spring · SQL · REST APIs | Enterprise B2B SaaS at Scale

SUMMARY

Software engineer with 7+ years at SOC, a B2B SaaS platform for occupational health and safety management serving 172,000+ users and 1.16M+ managed companies, including nearly 4 years as a developer building Java (Spring, Struts) and React applications. Cut a critical batch job from 2+ hours to under 5 minutes (~96%) by restructuring SQL queries and removing redundant database calls; developed a Spring Boot backend for a mobile app integrated with a legacy Struts system, and an AWS Lambda job behind monthly usage-based billing. A QA automation and support background (Selenium, Cucumber, CI/CD) shapes a test-first, reliability-focused approach. Based in Brazil (UTC-3), with a flexible schedule to overlap with US and European time zones; available as a contractor or through an EOR.

TECHNICAL SKILLS

- **Languages:** Java, Python, JavaScript, TypeScript, SQL, Go (basic)
- **Backend & APIs:** Spring Boot, Spring MVC, Struts (legacy), REST APIs, SOAP / web services, Hibernate / JPA, Spring Security, Maven
- **Frontend:** React.js, HTML, CSS
- **Databases:** MySQL, SQL Server, PostgreSQL, MongoDB; SQL query optimization
- **Cloud & DevOps:** AWS Lambda, AWS Lightsail, Docker, Jenkins, CI/CD, Linux, WildFly
- **Testing:** JUnit, Selenium, Cucumber (BDD), test automation
- **AI / LLM (personal projects):** RAG, LLM integration, vector search
- **Tools & Methods:** Git, Jira, Agile / Scrum, code review

PROFESSIONAL EXPERIENCE

SOC — B2B SaaS platform for occupational health and safety management (172,000+ users, 1.16M+ managed companies, 18.1M+ active records) · Santos, SP, Brazil

Java Software Developer · Nov 2022 – Present

Team: 4 developers, 2 QA engineers and 1 tech lead.

- Cut a critical batch-processing workflow from 2+ hours to under 5 minutes (~96%) by restructuring SQL queries and eliminating redundant database calls.
- Built an AWS Lambda job that runs monthly to count active lives per client and generate the charges for the platform's usage-based billing.
- Developed the Spring Boot backend of a mobile application and integrated it with the legacy Struts platform through web services.
- Built an internal Python desktop tool (executable with a GUI) that configures the local WildFly server, reducing development environment setup from several hours to under 60 seconds for the engineering team.
- Designed and consumed REST APIs to integrate platform modules.
- Acted as the team's Mizusumashi (a Lean-methodology support role), performing code reviews for the development team.
- Optimized React.js front-end components in high-traffic modules to improve UI responsiveness.
- Worked with QA to increase test coverage and reduce post-release defects.

QA Analyst · Apr 2021 – Nov 2022

- Automated functional and regression test suites with Selenium and Cucumber (BDD), increasing coverage and release confidence.
- Designed test cases and implemented CI/CD pipelines for automated test execution, improving deployment reliability.

- Partnered with developers on defect-prevention practices, shortening the bug-to-fix cycle.

Support Analyst · Dec 2018 – Apr 2021

- Provided Level 2 technical support and system analysis for enterprise B2B SaaS applications with a nationwide user base.
- Classified and prioritized incidents, produced detailed reports and coordinated resolution with development teams.
- Documented recurring issues and proposed systematic fixes, reducing repeat incident volume.

PROJECTS

document-qa-system-rag — RAG-based document Q&A system with citation tracking. Document ingestion, vector search and LLM-powered answers with source citations. Python, FastAPI, React, TypeScript, PostgreSQL.

weather-ai-dashboard — Weather dashboard with a Spring Boot backend that integrates external weather APIs and applies AI-assisted data processing, served to a dynamic frontend. Java, Spring Boot.

simulador-carteira-acoes — Stock portfolio simulator for the Brazilian exchange (B3): 3-month simulation with performance tracking, analytics and historical comparison. TypeScript.

EDUCATION

- **Technologist Degree (Tecnólogo, 3 years) in Systems Analysis and Development** — Fatec Rubens Lara, Santos, Brazil · 2021
- **B.Sc. in Chemical Engineering** — Santa Cecília University (UNISANTA), Santos, Brazil · 2018

LANGUAGES

- **Portuguese:** Native
- **English:** Advanced; completed an English program at Kaplan in Edinburgh, Scotland
- **French:** Intermediate
- **Spanish, German:** Basic
